ound nothing. The area lies in a fill section between 25-50 inches deep

There is no fence line occupation to the south or north. The area between B-1 and B-2 is a cultivated field.

Given the close proximity to the GLO proration, lack of historical evidence to support the corner as established by the County Surveyor in item 2 above or evidence to support a location at the prorated GLO location, I accepted the found 1/2" steel bar and cap #18998 as the best available evidence of the corner location. The location is supported by a subsequent survey by Larry Bryan in item 4 above which was used to create new parcels in the northwest 1/4 of section 6, T4N, R2E.

I projected the location North 0.31 feet and established the location on the standard township line. I set a 3/4" x 24" smooth steel bar and aluminum Ingham County remonumentation cap #47942 in a monument box nominally 7 feet north of the centerline of Milton Road.
